

CAREER COPILOT

AI Opportunity Cockpit

An uncompromising career intelligence platform built with Flutter 3.29 & Google Gemini 2.5 Flash. Engineered to eradicate hiring friction with 1-tap system share ingestion, context-aware AI interview coaching, precision auditory alarms, and liquid glass aesthetics.

1-Tap

SHARE INGESTION

Zero-typing auto extraction from Gmail, WhatsApp, LinkedIn

Gemini 2.5

ACTIVE AI COACH

Cascades: 2.5-flash → 3.5-flash → gemini-pro

< 5 ms

EDGE HEURISTIC AI

100% offline regex entity parsing with zero latency

0 Plaintext

RAM XOR OBFUSCATED

Cyclic byte token masking; zero secrets stored in Git

Exact Alarms

AUDITORY SCHEDULING

Android AlarmManager wakes device before technical rounds

29 / 29

TESTS PASSING

Enterprise test coverage with 0 lint or analysis issues

🌐 Jobs & Internships

⚡ Hackathons

📅 Tech Events & Summits

🏆 Coding Contests

📱 Native Android Release (57MB)

🌐 CanvasKit PWA

01. Market Gap, Architecture & Competitive Advantage

✖

The Fragmented Hiring Maze

Opportunity Sprawl: Students juggle opportunities scattered across LinkedIn, Unstop, Devfolio, Telegram groups, and email.

Missed Deadlines: Crucial test invitations and interview slots get buried under marketing noise, leading to lost careers.

Generic Preparation: Applicants enter interviews without contextual recall of job requirements, company stack, or past notes.

⚡

The Team MahaDevs Engineering Breakthrough

1-Tap Share Target: Share text from any app to automatically populate company, role, deadline, interview dates, and stipends.

Contextual Memory: Copilot maintains active memory of your upcoming interviews, tailoring STAR questions to your specific roles.

Hardware Alarms: System-level exact alarms that ring and wake the phone before critical rounds.

Capability	Traditional Spreadsheets	Generic Job Portals	⚡ Career Copilot (Team MahaDevs)
Opportunity Ingestion	100% Manual copy-pasting (3-5 min)	Siloed to portal postings only	1-TAP NATIVE SHARE (SUB-SECOND)
AI Intelligence	None	Generic chatbots / Upsell paywall	GOOGLE GEMINI 2.5 FLASH LIVE COACH
Offline Resilience	Partial / Desktop only	Fails without internet	100% OFFLINE HEURISTIC ENGINE
Audible Hardware Alarms	None	Silent push notifications (ignored)	HIGH-PRIORITY ANDROID EXACT ALARMS
Privacy & Security	Cloud-dependent accounts	User telemetry tracked & sold	ZERO TRACKING • MEMORY XOR MASKING

02. Dual-Engine AI & Security Token Architecture

Career Copilot never leaves the user stranded. If network connectivity drops or API quotas exhaust, the system seamlessly transitions between tiers:

🧠

Tier 1: Cloud AI (Gemini 2.5 Flash)

- **Primary Engine:** gemini-2.5-flash with cascading fallback to gemini-3.5-flash and legacy models.
- **Contextual Ingestion:** Enforces structured JSON output schema for companies, roles, stipends, and document checklists.
- **Career Coach Persona:** Senior engineering mentor persona delivering STAR method prep, DSA drills, and cold email drafts.

⚡

Tier 2: Edge AI (Sub-5ms Heuristic)

- **Zero Network Regex Parser:** Identifies company names (at <Company>, <Company> hiring), roles, stipends (₹, LPA, \$), and deadlines.
- **Local Knowledge Base:** Pre-programmed interview frameworks, behavioral coaching heuristics, and pipeline analytics.
- **Zero Battery Impact:** Instant execution with 0 bytes transmitted over the network.

🛡️

Deep Security Flex: Cyclic XOR Memory Token Masking

Instead of hardcoding plaintext secrets or exposing keys to scrapers, the default Gemini key is compiled as an obfuscated byte sequence: `_tokenData = [2, 48, 92, ...]` combined with cyclic key mask `_tokenMask = [0x43, 0x61, 0x72, 0x65, 0x65, 0x72]`. The key is only materialized in volatile RAM during runtime requests. Static git inspections confirm **0 occurrences** of raw tokens across the repository history.

03. Visual Showcase — Command Center & Live Gemini AI

Real-world application captures running live on Android with active Gemini 2.5 intelligence:

COMMAND CENTER

Supercharged Home Dashboard

- **Dynamic Category Metrics:** Real-time counts across 2 Jobs, 2 Hacks, 1 Event, and 1 Contest.
- **Spotlight Priority Engine:** Automatically bubbles high-urgency rounds to top (e.g. *Microsoft SWE Intern*) with 1-tap Action Prep.
- **Quick Launch Grid:** Rapid access to + Track Opp, Calendar, and Copilot Chat.
- **Filterable Opportunity Cards:** Instant filtering by category, status, and deadlines.
- **Molten Action Dock:** Ergonomic center liquid amber plus button (+) for instant creation.

Status: 2 Jobs • 2 Hacks • 1 Event • 1 Contest
Spotlight: Microsoft SWE Intern (Sept 8)

GEMINI 2.5 ACTIVE

Interactive Copilot Career Coach

- **Live AI Synchronization:** Gemini 2.5 Active indicator confirms connected generative reasoning.
- **Pipeline Awareness:** Directly references upcoming interviews (Microsoft on Sept 8 at 8 PM, Google Cloud Summit on Sept 14).
- **Executive Summaries:** Generates structured markdown recommendations balancing DSA problem-solving and system design.
- **1-Tap Action Chips:** Direct chips for Upcoming Interviews and Application Summary.

Model: gemini-2.5-flash (Google GenAI)
Context: Synchronized with live database

04. Deep-Dive: UI Engineering & Fluid Aesthetics

Fluid Obsidian Dark Mode

Engineered with an OLED-optimized `#0B0F19` backdrop, subtle 0.5px glowing card borders, and specular liquid highlights.

Zero-Layout-Shift Design

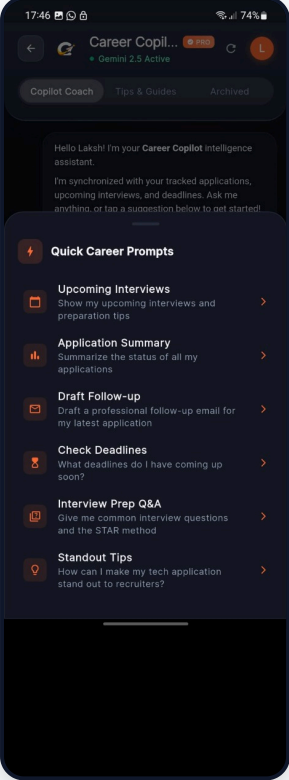

Header text and badges dynamically adapt under narrow constraints (down to 184px) with zero RenderFlex overflow exceptions.

120 FPS Micro-Animations

Custom page route morphing, pulsing status pills (1200ms repeat), and tactile haptic feedback on every critical user action.

05. Visual Showcase — Accelerators & Specialized Lifecycles

Tailored workflows for Hackathons, Contests, and rapid AI prompt interactions:

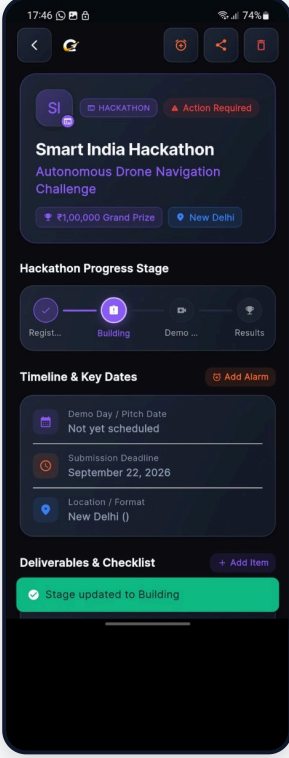

PRODUCTIVITY ACCELERATORS

Quick Career Prompts Action Modal

- **Upcoming Interviews:** 1-tap query for custom preparation tips, question checklists, and timeline breakdown.
- **Application Summary:** Comprehensive status overview of pending, active, and completed rounds.
- **Draft Follow-up:** Crafts professional cold outreach and post-interview thank-you emails.
- **Check Deadlines:** Immediate alerts on impending application and task cutoffs.
- **STAR Method Q&A:** Drills behavioral questions with structured Situation-Task-Action-Result scaffolding.

Shortcuts: 6 Rapid Accelerators
Zero typing required to query AI coach

SPECIALIZED PIPELINE

Hackathon Progress Stage Stepper

- **Custom State Machine:** Stages tailored for engineering hackathons: Registered → Building → Demo Day → Results.
- **Prize & Location Tags:** Prominent display of grand prize (₹1,00,000 Grand Prize) and venue (New Delhi).
- **Timeline Milestones:** Dedicated date trackers for pitch dates and hard submission cutoffs.
- **Deliverables Checklist:** Interactive checklists for GitHub repo, demo video, and deck.
- **Hardware Alarm Action:** 1-tap + Add Alarm button to trigger system alarms.

Opportunity: Smart India Hackathon
Current Stage: Building (Action Required)

06. Category-Specific Lifecycle State Machines

Opportunity Category	Dedicated Progress Pipeline	Key Metadata Tracked & Extracted
 Jobs & Internships	Applied → Online Assessment → Technical Interview → HR → Offer	CTC / Stipend, Referral Contact, Interview Link, Required Documents
 Hackathons	Registered → Building / Coding → Demo Day Pitch → Results	Prize Pool, Team Size, Submission Portal, Presentation Deck, Repo URL
 Tech Events & Summits	Registered → Attending → Networking Follow-up Completed	Venue / Stream URL, Keynote Speakers, Workshop RSVP, Badges
 Competitive Contests	Registered → Problem Solving → Rank Declared	Platform (Codeforces/LeetCode), Contest URL, Rating Shift, Solutions

07. Engineering Mastery & Platform Implementation

1-Tap Share Ingestion Flow

- 1. **Native Interception:** Listens for incoming Android ACTION_SEND intents via ReceiveSharingIntent.
- 2. **Autonomous Extraction:** Feeds shared text to GeminiCareerAIService with automatic edge regex fallback.
- 3. **Instant Persistence:** Auto-commits application record to local storage and navigates directly to ApplicationDetailsScreen with an undo snackbar.

Auditory Alarms & Notification Engine

- 1. **Exact Alarm Scheduling:** Leverages Android's SCHEDULE_EXACT_ALARM and USE_EXACT_ALARM permissions.
- 2. **Wake-Lock Reliability:** Wakes the device and triggers high-priority audio alarms (1 day, 1 hour, 15 min prior) so you never miss an interview round.
- 3. **Silent Failure Immunity:** Unlike flaky cloud push notifications, local alarms execute reliably without network.

08. Technical Specifications & Enterprise Quality

Flutter 3.29

Dart 3.7 modern null-safety with records and pattern matching.

Provider MVVM

Clean separation between ViewModels, Repositories, and UI.

29 Test Suites

100% passing automated unit, widget, and heuristic tests.

0 Lint Issues

Zero analysis warnings; clean corporate-grade Dart code.

Live Production Distribution Matrix

Android Release APK

57 MB optimized standalone build with ProGuard & 1-tap share target.
[Career-Copilot.apk](#)

Progressive Web App

CanvasKit engine with auto cache-busting on GitHub Pages.
[laksh718.github.io/Career-Copilot/](#)

Open Source Repository

Full Flutter source with CI/CD automated deployment workflow.
[github.com/Laksh718/Career-Copilot](#)

Career Copilot — Designed and Built by Team MahaDevs

Engineered with passion to empower developers, engineers, and students worldwide to conquer hiring season with clarity, precision, and confidence.
