

The Intelligent Career Cockpit with **Gemini 2.5 AI**

A unified platform engineered with Flutter to eliminate hiring friction through 1-tap system share ingestion, context-aware generative coaching, precision alarms, and liquid glass aesthetics.

PLAINTEXT SECRETS

01. Problem Statement & Strategic Vision

✗ The Hiring Season Dilemma

Application Sprawl: Opportunities arrive piecemeal across LinkedIn, Unstop, Devfolio, Telegram placement groups, and Gmail inboxes.

Missed Assessment Windows: Critical technical test invitations and interview slots get buried under marketing noise.

Context Deficit: Applicants enter interviews without immediate recall of job descriptions, referral contacts, or required DSA topics.

✦ The Career Copilot Architecture

Instant Ingestion: Share text from any app to automatically populate company, role, deadline, interview dates, and stipends.

Contextual Memory: Copilot AI maintains live memory of your tracked pipeline to generate customized preparation regimens.

Precision System Alarms: Hardware-level alarms wake the device before critical technical interviews.

Core Design Philosophy: Career Copilot is completely offline-first. All application records, logs, and interview details are persisted locally on-device. When cloud AI is disconnected, an edge heuristic engine instantly takes over.

02. Dual-Engine AI Architecture

To deliver unbreakable reliability, Career Copilot integrates a dual-tier intelligence pipeline combining Google's cloud generative reasoning with zero-latency on-device heuristics.

Intelligence Tier	Engine Technology	Capabilities & Responsibilities	Latency / Network
Tier 1: Cloud AI	Google Gemini 2.5 Flash (<i>Cascade: 3.5-flash / Pro</i>)	Contextual career coaching, behavioral STAR drills, follow-up cold emails, and nuanced semantic entity extraction.	~600ms Requires Internet / API Key
Tier 2: Edge AI	On-Device Heuristic Engine (<i>Regex & Temporal Parsers</i>)	Regex company detection, temporal date normalization, currency/stipend parsing, and structured placement recommendations.	< 5ms 100% Offline / No Key Needed

Zero Plaintext Secrets in Code

The default Gemini API key is obfuscated as an XOR byte sequence with a cyclic key mask (`_tokenMask = [0x43, 0x61, 0x72, 0x65, 0x65, 0x72]`) and decoded dynamically in RAM.

No repository scanner, git commit, or static inspection can uncover the raw token.

Stealth UI Masking

The key configuration sheet starts completely empty with a `.....` (Default key active) placeholder. Password toggles never reveal the default key.

Users can override with their custom key or clear to use offline mode anytime.

COMMAND CENTER

Supercharged Home Dashboard

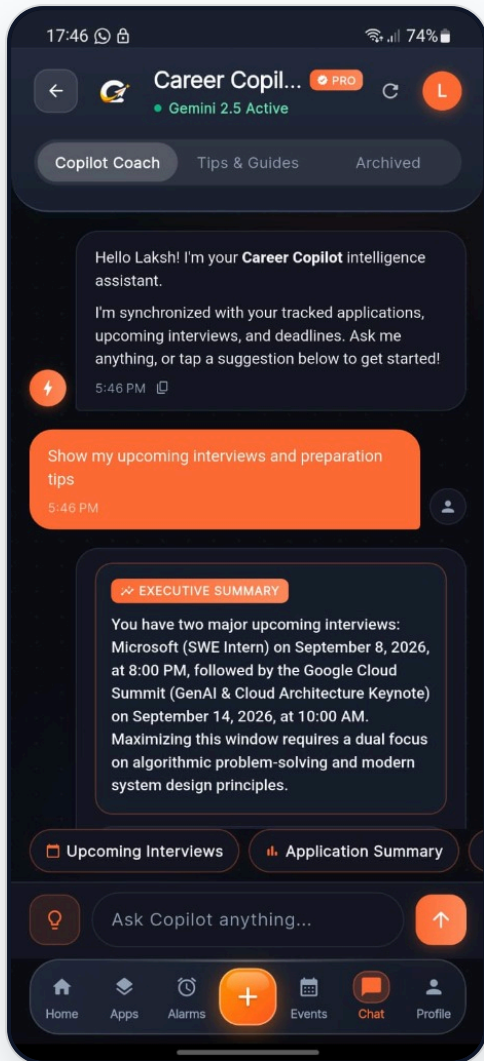

The executive dashboard provides an at-a-glance overview of active applications, prioritized spotlight opportunities, and quick navigation.

✓ Pipeline Metric Counters: Visual tallies across 2 Jobs, 2 Hacks, 1 Event, and 1 Contest.

✓ Opportunity Spotlight: Dynamic urgency scoring surfaces high-stakes events (e.g., *Microsoft SWE Intern*) with direct Action Prep shortcut.

✓ Quick Launch Hub: Rapid shortcuts to + Track Opp, Calendar, and Copilot Chat.

✓ Molten Action Dock: Ergonomic center liquid action button for instant opportunity entry.

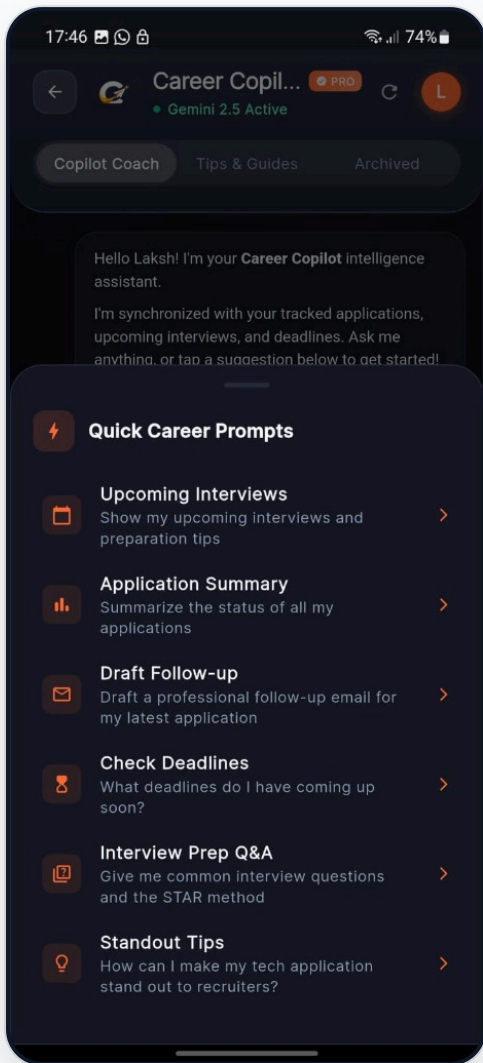

LIVE GENERATIVE AI

Copilot Career Coach (Gemini 2.5 Active)

An interactive career strategist connected directly to your application database for highly personalized coaching and preparation regimens.

- ✓ **Real-time Status Pill:** ● Gemini 2.5 Active indicates synchronized cloud intelligence.
- ✓ **Application Awareness:** Automatically references upcoming interviews (e.g., Microsoft on Sept 8, Google Cloud Summit on Sept 14).
- ✓ **Structured Executive Output:** Delivers actionable preparation advice balancing algorithmic problem-solving and modern system design.
- ✓ **Quick Action Chips:** 1-tap pills for Upcoming Interviews and Application Summary.

04. Deep-Dive: Intelligence & Pipeline Management

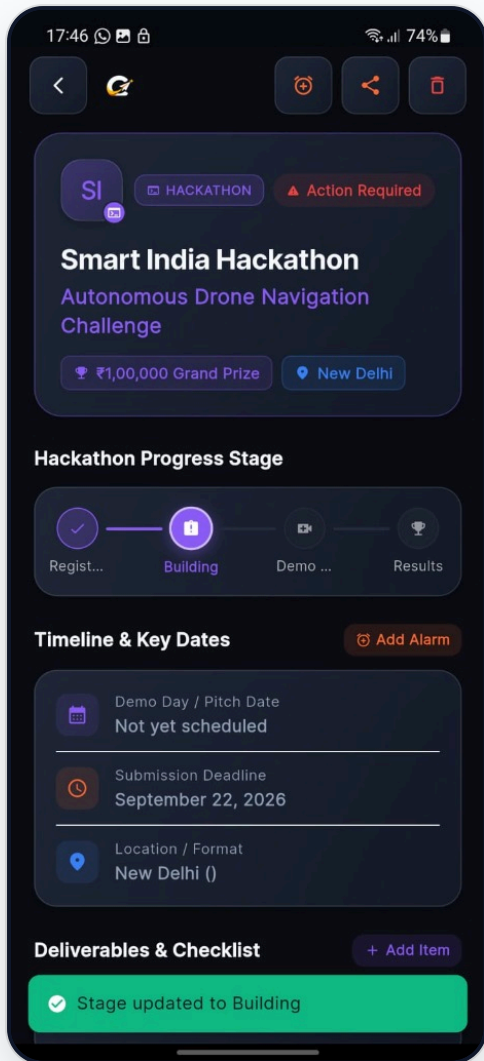

PRODUCTIVITY ACCELERATORS

Quick Career Prompts Action Modal

Curated one-tap coaching prompts designed to bypass typing fatigue and immediately extract high-value insights from the AI engine.

- ✓ **Upcoming Interviews:** Generates tailored interview preparation roadmaps and question checklists.
- ✓ **Application Summary:** Synthesizes your entire pipeline into a structured status report.
- ✓ **Draft Follow-up:** Crafts professional cold outreach and post-interview thank-you emails.
- ✓ **Check Deadlines:** Alerts you to imminent assignment and application cutoff dates.
- ✓ **Interview Prep Q&A:** Drills behavioral STAR scenarios and common technical pitfalls.

SPECIALIZED PIPELINE

Hackathon & Contest Lifecycle Tracker

Custom-tailored tracking stages designed specifically for collaborative engineering challenges and hackathons.

- ✓ **Custom Progress Stepper:** Stages tailored for hackathons: Registered → Building → Demo Day → Results.
- ✓ **Prize & Location Badges:** Prominently displays prize pool (₹1,00,000 Grand Prize) and format (New Delhi).
- ✓ **Timeline & Key Dates:** Dedicated trackers for demo days, submission deadlines, and pitch slots.
- ✓ **Deliverables & Checklist:** Interactive checklists for GitHub repos, pitch decks, and video demos.
- ✓ **1-Tap Alarm Integration:** Direct + Add Alarm button to schedule device notifications.

05. Technical Specifications & Distribution Matrix

Technology Stack

Framework: Flutter 3.29+ / Dart 3.7

State Management: Provider + ChangeNotifier
ViewModels

AI Integration: Google Generative AI
(google_generative_ai)

Persistence: SharedPreferences & Sandboxed
Local Storage

Native Bridge: Kotlin MethodChannel,
ReceiveSharingIntent

Styling: Fluid Obsidian Dark Mode (#0B0F19) +
Molten Amber

Build & Distribution Matrix

Android Release APK: 57 MB optimized
standalone APK with ProGuard tree-shaking and
exact alarm scheduling.

Web Progressive App: CanvasKit renderer
hosted on GitHub Pages with cache-busting
headers and automated service worker
unregistration.

CI/CD Automation: GitHub Actions pipeline
building both Web bundle and Android release
APK on every commit to main.

Category Lifecycle Matrix

Category	Lifecycle Stages	Specialized Metadata
 Jobs & Internships	Applied → Screening → Tech Interview → HR → Offer	CTC / Stipend, Referrals, Portal Link, Interview Rounds
 Hackathons	Registered → Building → Demo Day → Results	Prize Pool, Team Size, Pitch Deck, Submission Deadline
 Tech Events & Summits	Registered → Attending → Networking Follow-up	Venue / Virtual Link, Keynote Speakers, Badges
 Competitive Contests	Registered → Problem Solving → Rank Declared	Platform (Codeforces/LeetCode), Contest URL, Rating Impact
