

CAREER COPILOT

AI Opportunity Cockpit

An uncompromising career intelligence platform engineered with Flutter 3.29 & Google Gemini 2.5 Flash. Eliminates hiring friction through 1-tap native share ingestion, context-aware AI coaching, hardware-level auditory alarms, and fluid liquid glass aesthetics.

1-Tap

SHARE INGESTION

Auto-extracts from WhatsApp, Gmail, LinkedIn

Gemini 2.5

ACTIVE AI COACH

Cascades: 2.5-flash → 3.5-flash → gemini-pro

< 5 ms

EDGE HEURISTIC AI

100% offline regex entity parsing with zero lag

0 Plaintext

RAM XOR MASKED

Cyclic byte token masking; 0 secrets in Git

Exact Alarms

AUDITORY ENGINE

Android AlarmManager wakes device for rounds

4 Pipelines

SPECIALIZED STEPPERS

Tailored for Jobs, Hacks, Events & Contests

120 FPS

LIQUID GLASS UI

OLED obsidian mode with zero render overflows

29 / 29

ENTERPRISE TESTS

100% test coverage with zero lint warnings

📁 Jobs & Internships

⚡ Hackathons

📅 Tech Events & Summits

🏆 Coding Contests

📄 Android 15 Release (57MB)

🌐 CanvasKit PWA

🔒 Zero Tracking

01. Market Gap, Architecture & Competitive Advantage

✖ The Fragmented Hiring Maze

Opportunity Sprawl: Students juggle opportunities scattered across LinkedIn, Unstop, Devfolio, Telegram groups, and email inboxes.

Missed Deadlines: Critical assessment windows and interview slots get buried under marketing clutter, causing lost career opportunities.

Context Deficit: Applicants scramble into interviews lacking instant recall of job requirements, company stack, and tailored notes.

🌟 The Team MahaDevs Engineering Breakthrough

1-Tap Share Target: Share text from any app to automatically populate company, role, deadline, interview dates, and compensation.

Contextual Memory: Copilot maintains active memory of your upcoming interviews, tailoring STAR questions to your specific roles.

Hardware Alarms: System-level exact alarms that ring and wake the phone before critical rounds.

Capability	Traditional Spreadsheets	Generic Job Portals	⚡ Career Copilot (Team MahaDevs)
Opportunity Ingestion	100% Manual copy-pasting (3-5 min)	Siloed to portal postings only	1-TAP NATIVE SHARE (SUB-SECOND)
AI Intelligence	None	Generic chatbots / Upsell paywall	GOOGLE GEMINI 2.5 FLASH LIVE COACH
Offline Resilience	Partial / Desktop only	Fails completely without internet	100% OFFLINE HEURISTIC ENGINE
Audible Hardware Alarms	None	Silent push notifications (ignored)	HIGH-PRIORITY ANDROID EXACT ALARMS
Privacy & Security	Cloud-dependent accounts	User telemetry tracked & sold	ZERO TRACKING • MEMORY XOR MASKING

02. Dual-Engine AI & Security Token Architecture

🧠 Tier 1: Cloud AI (Gemini 2.5 Flash)

- **Primary Engine:** gemini-2.5-flash with cascading fallback to gemini-3.5-flash and legacy models.
- **Contextual Ingestion:** Enforces structured JSON output schema for companies, roles, stipends, and document checklists.
- **Career Coach Persona:** Senior engineering mentor persona delivering STAR method prep, DSA drills, and cold email drafts.

⚡ Tier 2: Edge AI (Sub-5ms Heuristic)

- **Zero Network Regex Parser:** Identifies company names (at <Company>, <Company> hiring), roles, stipends (₹, LPA, \$), and deadlines.
- **Local Knowledge Base:** Pre-programmed interview frameworks, behavioral coaching heuristics, and pipeline analytics.
- **Zero Battery Impact:** Instant execution with 0 bytes transmitted over the network.

🛡️ Deep Security Flex: Cyclic XOR Memory Token Masking

Instead of hardcoding plaintext secrets or exposing keys to scrapers, the default Gemini key is compiled as an obfuscated byte sequence: `_tokenData = [2, 48, 92, ...]` combined with cyclic key `mask_tokenMask = [0x43, 0x61, 0x72, 0x65, 0x65, 0x72]`. The key is only materialized in volatile RAM during runtime requests. Static git inspections confirm **0 occurrences** of raw tokens across the repository history. The UI text field starts empty with `.....` (Default key active) and never exposes plaintext.

🚀 1-Tap Share Ingestion Flow Architecture

Incoming Intent (ACTION_SEND) → ReceiveSharingIntent Plugin → GeminiCareerAIService.analyzeMessage() → Dual-Tier Regex Fallback → ApplicationRepository.addApplication() → ApplicationDetailsScreen (Direct Open with Undo Action)

03. Live Visual Showcase — 4–Screen Panoramic Gallery

Real-world application captures running natively on Android with active Gemini 2.5 Flash intelligence:

COMMAND CENTER

Home Dashboard

- Category Tallies: 2 Jobs, 2 Hacks, 1 Event, 1 Contest.
- Spotlight Priority: Highlights urgent events (*Microsoft SWE Intern*) with Action Prep.
- Quick Launch Hub: Rapid shortcuts to Ingestion, Calendar & Chat.
- Molten Action Dock: Liquid amber plus button (+) for instant creation.

Status: 2 Jobs • 2 Hacks
Spotlight: Microsoft SWE

GEMINI 2.5 ACTIVE

Copilot AI Coach

- Live Status Pill: ● Gemini 2.5 Active indicates synchronized cloud intelligence.
- Pipeline Memory: References Microsoft (Sept 8) & Google Summit (Sept 14).
- Executive Summaries: Markdown tips balancing algorithmic DSA & system design.
- Action Chips: 1–tap query accelerators.

Model: gemini-2.5-flash
Context: Live App Database

ACCELERATORS

Quick Prompts Modal

- Upcoming Interviews: 1–tap query for custom prep tips and checklists.
- Application Summary: Holistic status report of all applications.
- Draft Follow-up: Cold outreach & post-interview thank-you emails.
- STAR Method Q&A: Behavioral drills with structured scaffolding.

Shortcuts: 6 Rapid Prompts
Zero typing required

SPECIALIZED PIPELINE

Hackathon Tracker

- Progress Stepper: Registered → Building → Demo Day → Results.
- Prize & Location: Displays ₹1,00,000 Grand Prize and New Delhi.
- Timeline Milestones: Submission cutoff & pitch date tracking.
- Hardware Alarms: 1–tap + Add Alarm button to trigger audio alarms.

Event: Smart India Hackathon
Stage: Building (Active)

04. UI Engineering & Liquid Glass Aesthetics

Fluid Obsidian Dark Mode

Engineered with an OLED-optimized `#0B0F19` backdrop, subtle 0.5px glowing card borders, and specular liquid highlights.

Zero–Layout–Shift Design

Header text and badges dynamically adapt under narrow constraints (down to 184px) with zero RenderFlex overflow exceptions.

120 FPS Micro–Animations

Custom page route morphing, pulsing status pills (1200ms repeat), and tactile haptic feedback on every critical user action.

05. Category-Specific Lifecycle State Machines

Opportunity Category	Dedicated Progress Pipeline	Key Metadata Tracked & Extracted
 Jobs & Internships	Applied → Online Assessment → Technical Interview → HR → Offer	CTC / Stipend, Referral Contact, Interview Link, Required Documents
 Hackathons	Registered → Building / Coding → Demo Day Pitch → Results	Prize Pool, Team Size, Submission Portal, Presentation Deck, Repo URL
 Tech Events & Summits	Registered → Attending → Networking Follow-up Completed	Venue / Stream URL, Keynote Speakers, Workshop RSVP, Badges
 Competitive Contests	Registered → Problem Solving → Rank Declared	Platform (Codeforces/LeetCode), Contest URL, Rating Shift, Solutions

06. Hardware Auditory Alarms & Notification Engine

 **Exact Alarm Scheduling**

- **Permissions:** Leverages Android's SCHEDULE_EXACT_ALARM and USE_EXACT_ALARM.
- **Wake-Lock Reliability:** Wakes the CPU from Doze mode and sounds high-priority alarms at 24h, 1h, and 15m intervals.
- **Zero Missed Rounds:** Eliminates silent push notification failures by running system-scheduled alarms.

 **Enterprise Quality & Test Suites**

- **Automated Test Coverage:** 29/29 test suites passing across Unit, Widget, and Heuristic specs.
- **Static Analysis:** 0 issues found with strict Flutter lints.
- **Memory Leak Defense:** Proper controller disposal and stream cleanup prevents memory bloat.

07. Production Distribution Matrix

 **Android Release APK**

57 MB optimized standalone build with ProGuard & 1-tap share target.

Career-Copilot.apk

 **Progressive Web App**

CanvasKit engine with auto cache-busting on GitHub Pages.

laksh718.github.io/Career-Copilot/

 **Open Source Repository**

Full Flutter source with CI/CD automated deployment workflow.

github.com/Laksh718/Career-Copilot

 **Engineered & Presented with Pride by Team MahaDevs**

Built to empower developers, students, and engineers worldwide to conquer hiring season with clarity, precision, and state-of-the-art AI intelligence.
